UNITE - UNIVERSITY NETWORK FOR INTERDISCIPLINARY TEAMWORK AND ENGAGEMENT

Abstract:

UNITE (University Network for Interdisciplinary Teamwork and Engagement) is a web application designed to help students from different academic programmes connect and work together. Students can create profiles, share their interests, find other students and send friend requests. They can form groups of up to six members, with only one student from each programme. Group members can use polls to make decisions and plan activities. When an event needs more than six participants, two or more groups can work together. Students can also submit details of their participation and achievements along with certificates or other proof. Faculty members or administrators review these submissions before points are added to group leaderboards. The application aims to encourage friendship, teamwork and learning among students from different fields.

The main end users of UNITE are:

1. **Students** - To create profiles, make friends and connect with peers across programmes.
2. **Group Members and Leaders** - To form groups, conduct polls and coordinate collaborations.
3. **Faculty Coordinators** - To review evidence and approve or reject achievement claims.
4. **Administrators** - To manage student access and oversee verification and scoring.

Feasibility of the Project

UNITE is feasible using commonly available web technologies and a relational database.

- **Technical Feasibility:** HTML, CSS, JavaScript, Node.js, Express.js and MySQL support student profiles, groups, polls, evidence review and leaderboards.
- **Economic Feasibility:** The project can use free or open-source development tools; deployment and file storage costs depend on the hosting service.
- **Operational Feasibility:** A straightforward interface serves students, with a separate review workflow for faculty and administrators.

Modules

1. User Interface Module
2. Student Registration and Profile Module
3. Peer Discovery and Friendship Module
4. Interdisciplinary Group Formation Module
5. Group Polls and Collaboration Module
6. Achievement Submission and Verification Module
7. Points and Leaderboard Module

Languages

- **HTML** - Web page structure and forms
- **CSS** - Styling and responsive layout
- **JavaScript** - Browser interaction and server-side logic
- **SQL** - Database storage, queries and integrity constraints

Tools / Technologies

- **Node.js + Express.js** - Backend application and routes
- **MySQL** - Relational database
- **bcrypt + server sessions** - Password hashing and authentication
- **Bootstrap (optional)** - Responsive interface styling

PROPOSED RESULT	COLLEGE	STATE	NATIONAL
1st	100	150	200
2nd	70	105	140
3rd	50	75	100
4th	45	67.5	90
5th	40	60	80
6th	35	52.5	70
7th	30	45	60
8th	25	37.5	50
9th	20	30	40
10th	15	22.5	30
Participation only	10	15	20

Proposed points; 3rd to 10th place decreases by 5 base points per rank.
State = 1.5x college; National = 2x college. Points require verification.

Additionally featured Modules

1. Student Networking and Friendship Module

- Student registration restricted to eligible programmes
- Profiles with About, Interests and custom Links
- Peer search, friend requests and accepted connections
- Discovery of students beyond one academic programme

2. Interdisciplinary Groups and Polls Module

- Maximum six students per group
- Only one member from each academic programme
- Server-side validation of all membership rules
- Poll-based group decisions and meetup planning
- Multiple independent groups can collaborate on a larger activity

3. Verified Achievements and Leaderboard Module

- Students submit achievement details with supporting evidence
- Faculty or administrator approval or rejection
- PSG-hosted = college; other colleges = state; Institutes of National Importance = national
- Approved group achievements appear in the leaderboard

ABOUT UNITE:

UNITE brings students from different programmes together on one platform. Students can find friends, share interests, form diverse groups and make group decisions through polls. They can submit proof of participation and achievements for review before points are added to group rankings. The application encourages students to work together while building meaningful friendships and learning from one another.
